

Control access anywhere, even the middle of nowhere.

When you need secure access control in remote locations, GE Security's DirecDoor™ IP-connected controller is the ideal solution. Combining two-reader and two-door capability with Power over Ethernet (PoE) functionality, DirecDoor installs easily with no need for a separate power supply.

DirecDoor saves installation costs since you only terminate the wiring once. Remote facility access is monitored with online, real-time control over a standard Ethernet connection. Securing remote locations starts with GE Security — going out of our way to safeguard those hard to reach places.

For more information call 1-877-GES-MKTG or visit gesecurity.com/direcdoor.
